

Description:

Lobo Pebble and Quartz | NPT® Modifier:

Lobo™ - NPT Pool Finish Modifier is a high-performance formulated admixture which features pozzolan, polymer and a hydrophobic chemistry designed to enhance all types of pool finishes. The pozzolan reacts with calcium hydroxide formed when cement is hydrated. The polymer protects pigment particles from chemical reaction, locks in pigments and aggregates, and improves the flexibility of the pool finish. Lobo reduces mottling, plaster dust, and increases repellency and stain protection. Experience the improved pool startup result and the satisfied homeowner when using Lobo.

Benefits:

Improved Color Consistency | Aggregate adhesion | Workability | Overall Durability

Packaging:

25 lbs. white paper bag featuring Lobo logo.

Dosage:

1 - 25 lbs. bag per 1 full batch of plaster material. This information is included on the bag as well. There are two versions of Lobo to choose from; Pebble & Glass or Quartz Pool Finishes.

1.	 LOBO <small>PEBBLE & GLASS FINISHES</small>	 <hr/>  <hr/> 	2.	 LOBO <small>QUARTZ FINISHES</small>	 <hr/>  <hr/> 
----	---	--	----	--	--

The Pebble & Glass version contains more additive to accommodate the additional white cement in these formulas. The NPT Batch Formula Cards specify which Lobo to use for that pool finish.

Mixing Sequence:

Following the proper mixing sequence is a very important aspect of NPT's high-performance pool finishes. The batch mixing guidelines can be found on all NPT Pool Finish Product Specification Sheets. If you need the latest Product Specification Sheets please ask your local NPT, SCP, SPP or JetLine representative for a copy.

Technical Information:

Compressive Strength 6,175 psi @ day 7
